HALL ESTILL
ATTORNEYS AT LAW

Data Centers

As artificial intelligence continues to grow more prevalent in an ever-connected world, data centers are emerging as the future of innovation. Hall Estill attorneys are experienced providing end-to-end guidance and legal support to data center developers and operators.

The Firm's experience spans the entire data center lifecycle and encompasses myriad practice areas during the strategic planning, development, construction, operational, and decommissioning stages of a data center. Our expertise and experience advising clients includes the following:

- Real Estate Acquisition and Development
- Mergers and Acquisitions
- Site Control, Land Use, and Zoning
- Project Financing
- Tax
- Behind the Meter Power Generation
- Power Purchase Agreements
- Interconnection Agreements
- Energy Procurement
- Permitting and Licensing
- Environmental, Cultural and Natural Resources
- Cybersecurity and Data Privacy
- Regulatory Compliance
- Leasing and Operating Arrangements
- Telecommunications

In addition, our team routinely advises on the delivery of infrastructure across large-scale, co-located and multi-campus sites. Engaging directly with the operational complexities of data center environments, we assist in structuring resilient energy solutions and power procurement strategies.

Hall Estill attorneys also routinely lead negotiations for service agreements, interconnection agreements, and leases with hyperscale tenants and critical service providers, helping ensure scalable platforms that can drive digital transformation and maintain operational continuity.
